

Features

- › SSO based on smartcard, USB key, contactless card or biometrics
- › Automation of Windows application login
- › Automation of any html forms
- › Automation of emulators
- › Advanced detection of windows screens
- › Random and comple x passwords generation
- › Local or centralized administration of users and token profiles
- › Fast and easy integration (including PKI environment)
- › From Windows Seven
- › AD and LDAP compliant
- › Citrix -TSE compliant

Catch it

- › End user ease of use
- › High costs reduction on Help desk
- › Single access badge to buildings and network

Secure access to your applications

IDactis makes use of complex passwords easy

A recent survey demonstrated that nearly 65% of all users manage an average of 4 to 10 passwords. As a results, passwords are either easy or difficult to memorize. Therefore users write it on a piece of paper for everyone to see.

The solution is to use complex and specific passwords for each application, while avoiding to burden the users with impossible to memorize passwords.

PIN code + Token: the winning solution for users

With IDactis Security, users must have two authenticators : a PIN code and a token such as a smartcard, a contactless card, an USB key or a fingerprint. It provides security in case of theft and contributes in making the users more responsible for their information security.

Users just have to insert their token and type the PIN code : they are right away and safely connected to their applications !

password?

Helpdesk passwords issues are fewer

No need to remember complex or impossible to memorize passwords: they are safely stored in the token. Benefits for the help desk are tremendous: the waste of time due to password issues (omission, locked accounts, etc.) are a lot fewer.

Furthermore, all security functions can now be located into one single token : building access, lunch, time recording and IT security.

Secure your immaterial assets

A team of highly skilled security experts is behind IDactis. 10 years of experience in protecting data and network access makes the difference.

IDactis solutions are distributed in the US and in Europe through an exclusive sales channel, including software and hardware manufacturers as well as VARs.

Our software solutions are fully compatible with the market standards in order to guarantee upgradeability. Security must not hinder productivity : this is why IDactis solutions are easy to use, deploy and maintain.

IDactis Security is available on Professional and Corporate version.

> **Corporate/Advanced Edition (50 workstations and more)**

Extra features regarding the Professional version

- > LDAP , Citrix -TSE
 - > Advanced passwords management
- Version dedicated to businesses requiring high level of integration and management.

> **SMB Edition (Less than 50 workstations)**

Version dedicated to businesses which quickly want to reinforce IT security with no impact on their infrastructure.

Language : english and french

Token :

- PKCS#11 compliant token (USB key and smartcard)
- Minidriver compliant token
- Contactless card
- Fingerprint reader
- USB memory key

Easy to use and to manage

IDactis introduces the SSOBox technology to safely store and detect application features (url, account, form, etc.).

Login windows and html forms are automatically detected: Single-Sign On definitely becomes a game child for administrators !

A LDAP connector allows to synchronize users accounts between the security token and the LDAP database.

IDactis Security automatically detects connection information entered by users to access to their applications.

Connection information are then registered into the token and provided to the application when opening.

Users do not need to memorize complex passwords: everything is safely stored in the token !
